• Vaccination program •

Calves must be vaccinated against the following:

☑ Infectious Bovine Rhinotracheitis (IBR)
☑ Parainfluenza 3 (PI$_3$)
☑ Bovine Respiratory Syncytial Virus (BRSV)
☑ Bovine Viral Diarrhea (BVD)

The veterinarian's recommendations must be followed at all times.

☑ Vaccines are administered by deep intramuscular injection in the neck muscle or subcutaneously with clean needles at least one inch long.
☑ For storage, handling and administration of vaccines, the manufacturer's instructions must be followed closely.

Calves marketed must be vaccinated according to one of the 2 following vaccination programs:

➢ **Killed vaccine (2 doses):** Vaccine administered to a calf at least 4 months of age.
The booster dose must always be given 2 to 4 weeks after the first dose. At the very latest, the vaccine (1st dose) must be administered 4 weeks before the sale and the booster 2 weeks before the sale.

➢ **Modified live vaccine (1 dose):** Administered to a calf at least 4 months of age at least 2 weeks prior to the sale.
