Short term outlook

- Usually, beef is not very popular in the hot summer months especially in July and August. This year is no exception, the price of cuts has been falling steadily since the end of June. For producers, the drop in supply strengthens their bargaining power and keeps prices high.
- The fall in the price of the cuts added to the high price of steers leads to a consequent deterioration in the margin of the slaughterhouses. It is therefore to be expected that processing plants will reduce slaughterings to protect their margins. In the short and medium term, the reduction in supply should continue to support producer prices.

Long term outlook

- The cattle herd in the United States and Canada is in a contraction phase of the cattle cycle. With the drought still present in certain cow-calf producing regions, the reconstruction of the herd is not yet relevant. The decline in herds that began in 2019 will lead to a significant drop in beef production at least until 2025.
 - Measures taken to fight inflation will lead to an economic slowdown that will likely hurt consumer demand for beef products. However, the resilience of global demand and especially the decline in North American beef supply should support the market in the medium and long term.
