Short term outlook

- The cold snap in the United States limits the movement of animals and has led to a drop in slaughter since the start of the year. The drop in supply allowed the sector to raise the price of cuts by a few dollars. However, this increase was not passed on to producers, with the slaughterhouse margin still well anchored in the red.
 - Generally, the months of January and February are characterized by low domestic demand for beef. This year should not be the exception. A drop in the price of cuttings is expected for the rest of the winter. Despite the normal slowdown in demand, producers will need to be able to maintain price levels.
-

Long term outlook

- The cattle herd in the United States and Canada is in a contraction phase of the cattle cycle. With the drought still present in certain cow-calf producing regions, the reconstruction of the herd is not yet relevant. The decline in herds that began in 2019 will lead to a significant drop in beef production at least until 2025.
 - Measures taken to fight inflation will lead to an economic slowdown that will likely hurt consumer demand for beef products. However, the resilience of global demand and especially the decline in North American beef supply should support the market in the medium and long term.
