Beef imports and exports in United-States

Sources :

- USDA et Cattlefax

Short term outlook

- Cattle markets appear to have absorbed the news of HPAI cases in the United States. The price of cuts has resumed a seasonal upward trend in recent weeks.
 - The very high weight of carcasses increases the availability of beef despite the drop in slaughters. Despite the ample availability of beef, excellent seasonal demand should be sufficient to maintain or increase producer prices in the short term.
-

Long term outlook

- The cattle herd in the United States and Canada is in a contraction phase of the cattle cycle. With the drought still present in certain cow-calf producing regions, the reconstruction of the herd is not yet relevant. The decline in herds that began in 2019 will lead to a significant drop in beef production at least until 2025.
 - Measures taken to fight inflation will lead to an economic slowdown that will likely hurt consumer demand for beef products. However, the resilience of global demand and especially the decline in North American beef supply should support the market in the medium and long term.
